

Ameenur Rahman

Senior Software Engineer

8years and 8 months of Experience

ameenurrahman077@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Chennai

SKILLS

- Java
- Spring boot
- React
- Postgres SQL
- Jira
- confluence
- AWS

DSA TECHNIQUES

- Two Pointer
- Sliding Window

Industry expertise

AdTech, Telecom , HealthCare, Ecommerce,

Qualifications

- M.Sc. Computer Science
- B.Sc. Computer Science

Tools and software

IntelliJ, JIRA, EJIRA, Postgres, MySQL, GitLab

Environments

Production, UAT, Dev and Testing

Languages

English, Tamil and Arabic (intermediate)

Profile

I am a Senior Software Engineer with eight years of experience, specializing in Java, Spring Boot, MySQL, PostgreSQL, and Microservices. Throughout my career, I have gained valuable insights across diverse sectors such as healthcare, eCommerce, and advertising.

I thrive in gathering development requirements and facilitating knowledge transfer for new projects, while also contributing innovative ideas that directly enhance the company's ROI.

Work Experience

Company Name : CGI | **Role:** Senior Software Engineer

Project Name: – **Service Diagnostic Test | Telecom Industry** | Dates: 04/25 to Present

Responsibilities:

- Designed and developed various scalable Spring Boot micro services for telecom service diagnostics, managing high volumes of operational data.
- Deployed and tested all micro services within the Bell cloud environment using GitLab.
- Created an end-to-end High-Level Design (HLD) to address bulk request loads and enhance performance through Kafka events.
- Lead architecture and implementation of micro services and REST APIs for diagnostic capabilities for new copper and video tests using Kafka notification for Async calls and improved performance by 50 %
- Optimised PostgreSQL deployed on GCP and optimised the existing relational model to JSONB access patterns and increased workflow performance by 30%.

About the Project:

- This application addresses diagnostic tests initiated by users or clients.
- The requests originate from Wi-Fi devices connected via Copper or fiber cables.

Technologies Used: Java, Spring Boot, PostgreSQL (JSONB), REST APIs, Microservices

Company Name : Memob+. | **Role:** Senior Software Engineer

Project Name: Allpings , Data Management Platform | **AdTech Domain** | Dates : 10/22 to 03/25

Responsibilities:

- Responsibilities:
- Developed full-stack features with Java 17 (Spring Boot) and React.
- Implemented social logins using Meta, Snap, and TikTok APIs for exporting MAID IDs.
- Integrated secure stripe **payment gateway** and **social login providers**; reduced onboarding friction by 80%.
- Built **asynchronous events** with RabbitMQ and Kafka; boosted processing throughput by 40%.

About the Project:

- This app features a pay-as-you-go model for onboarding clients or users.
- It allows users to export audiences to social media platforms by connecting through their authorised social accounts.
- It provides audience insights on various stores based on countries and applies filters to generate MAID ID audiences.

Technologies Used: Java 17, Spring Boot, React, RabbitMQ, Kafka, Redis, Caffeine, PostgreSQL

Company Name : Tracker Wave | **Role:** Software Engineer

Project Name: Real Time Location System | **Health care Domain** | **Dates :** 03/20 to 10/22

- Created RESTful APIs using Spring Boot for a Real-Time Location Services (RTLS) application aimed at tracking porters and assets within hospitals.
- Implemented a Java Scheduler to ensure timely email delivery of patient reports across various time zones, while leveraging MySQL for efficient querying of multi-location healthcare data.
- Furthermore, oversaw location data analytics using ClickHouse to gain real-time performance insights.
- Authored complex MySQL queries and DB objects; improved data retrieval speed by 25%.

About the Project

- Comprehensive management of healthcare location systems to Software as a Service (SaaS).
- Capability to locate and assign porters (who transport patients on stretchers or wheelchairs) to patients on different floor levels.
- Tracking hospital assets using tags for real-time location visibility within the app.

Technologies Used: *Spring Boot (Maven), Java Scheduler, MySQL, ClickHouse, Mttq queue*

Company Name : CTela Solutions PVT LTD | **Role:** Intern Software Engineer

Project name : **IoT Analytics Platform** | **E - commerce Domain** | **Dates :** 02/17 to 03/20

- Create strong Java web applications utilising Spring Core, Spring IOC, Spring Data JPA, Spring Integration, and Hibernate ORM.
- Implement Thyme leaf for the frontend in conjunction with MVC Spring.
- Employ Git for version control and effective code collaboration.
- Normalised MySQL schemas; improved query performance by 30%.

About the Project

- Offer detailed insights into IoT SIM card sales data.
- Function as a KPI platform to evaluate the performance of IoT SIM card sales.

Technologies Used: *Spring Core, Spring IOC, Spring Data JPA, Spring Integration, Hibernate, Maven, Git, MySQL*
